Final set-up drives: New Tiguan¹ with premium class technologies and a long electric range

- MQB evo – the latest evolutionary stage of the modular transverse matrix platform brings a variety of modern technologies on board the Tiguan
- In future, the successful model will be launched with premium features such as HD matrix headlights and new adaptive chassis control
- New cockpit and infotainment generation for intuitive and logical operating concept has been developed in response to customers feedback
- World premiere will take place in the autumn; the market launch is scheduled for 2024

Wolfsburg – As part of final test drives, the Volkswagen brand is announcing the first details of its currently best-selling model: The third generation of the new Tiguan will be available with a newly developed active suspension control system and full-size features such as HD Matrix headlights. It is based on the new generation of the modular transverse matrix, MQB evo. With plug-in hybrid drive, the new Tiguan will achieve electric ranges of up to 100 kilometres in the future. The world premiere will take place in autumn, and the bestseller will be launched on the market in 2024.

The camouflaged Tiguan during final test drives

The Tiguan has been the Volkswagen brand's best-selling model worldwide for years. Since its debut in autumn 2007, more than 7.4 million people around the world have chosen this SUV. Now Volkswagen is completely relaunching the successful model.

Volkswagen has further developed the modular transverse matrix for the new Tiguan. The new generation is called **MQB evo**. Kai Grünitz, Member of the Brand Board of Management responsible for Technical Development: "State-of-the-art technology components interact perfectly in the MQB evo: a new generation of plug-in hybrid drives with electric ranges of up to 100 kilometres, probably the best active chassis control in its segment, premium interior quality and an equally new and intuitive infotainment system deliver what drivers expect from Volkswagen."

Some new features at a glance

IQ.LIGHT HD matrix headlights. The Tiguan will be one of the first vehicles in its class to be available with optional HD matrix headlights. The IQ.LIGHT HD matrix headlight technology was developed jointly for the Tiguan and Touareg. Based on the top-down principle, the lighting technology of a premium-class model will now be used in the mid-sized Tiguan.

Media Information

New display- and operating concept. The interior of the Tiguan has been revamped and designed. Volkswagen has taken specific customer requirements into account for intuitive operation. For example, the Tiguan comes onto the market with a newly developed cockpit and a new infotainment system. A screen with a diagonal of up to 38 centimetres (15 inches) clearly displays important functions such as navigation, music and climate control and can be customised with quick access. The center console also houses the Driving Experience Control. The rotary control with its own mini-screen can be used to control drive mode, radio volume or ambient lighting colours. High-quality materials, newly developed seats and effective noise insulation increase value and comfort. In particular, in conjunction with a new "acoustic package" (optional), the Tiguan is designed to provide premium-class noise comfort. The centre consoles also offer more space for storage.

In future, the Tiguan will be offered exclusively with an automatic transmission DSG. Like on the Volkswagen ID. models, the gear position is now changed by means of a steering column switch on the right of the steering wheel with a self-explanatory operating principle. The switch is turned forwards to "D" to drive forwards and backwards to "R" to reverse, while the parking brake is activated by pressing the side of the switch. In addition, paddle shifters are available behind the steering wheel.

Electronically controlled suspension for more comfort and dynamics. The MQB evo provides the starting point for a new generation of the adaptive suspension control DCC: the optional DCC Pro with two-valve shock absorbers. The new model is now additionally equipped as standard with a vehicle dynamics manager – an MQB system that made its debut in the current Golf GTI². The system controls the functions of the electronic differential locks (XDS) and the lateral dynamics components of the controlled shock absorbers in the DCC Pro system. Thanks to the Vehicle Dynamics Manager, which performs wheel-specific braking interventions and wheel-selective adjustments of the shock absorber hardness, the handling characteristics are more neutral, stable, agile and precise. This progress will be noticeable on board through increased comfort as well as significantly improved performance in dynamic cornering.

TDI, TSI, eTSI and eHybrid. Thanks to MQB evo, different drive types are possible for the Tiguan. It will be offered with turbodiesel engines (TDI), turbocharged petrol engines (TSI), mild hybrid turbocharged petrol engines (eTSI) and plug-in hybrid systems (eHybrid). The electric range of the new plug-in hybrid drives has been increased to up to 100 kilometres compared with the predecessors, depending on equipment. In addition, AC charging will be faster in all eHybrid versions, and DC charging will also be possible as standard for the first time.

Premium-class seats. The Tiguan will be optionally available with ergoActive front seats. Among other things, these seats come with pneumatic four-way lumbar support adjustment and a pneumatic 10-chamber pressure point massage function in the backrests – features that are usually found in premium-class models. They are also equipped with seat heating and ventilation.

Larger luggage compartment in the Tiguan. The new Tiguan grows in length by around three centimetres. Height, width and wheelbase remain almost identical to the

predecessor. The luggage compartment capacity of the new generation shows just how good the use of space is: although the SUV is only slightly longer, its luggage compartment capacity has increased by 37 litres to 652 litres (when loaded up to the height of the rear seat backrests).

¹ *Tiguan – Camouflaged near-series prototype. The model is not yet available for sale.*

² *Golf GTI – Fuel consumption combined in l/100 km: 7.4-7.0; CO₂ emissions combined in g/km: 167-160; only consumption and emission values in accordance with WLTP and not NEDC are available for the vehicle. Information on consumption and CO₂ emissions, shown in ranges, depends on the selected vehicle equipment*

The Volkswagen Passenger Cars brand is present in more than 140 markets worldwide and produces vehicles at 29 locations in twelve countries. In 2022, Volkswagen delivered around 4.6 million vehicles. These include bestsellers such as the Polo, T-Roc, T-Cross, Golf, Tiguan or Passat as well as the successful all-electric models ID.3, ID.4, ID.5 and ID.6. Last year, the company handed over more than 330,000 all-electric vehicles to customers worldwide. Around 170,000 people currently work at Volkswagen worldwide. With its ACCELERATE strategy, Volkswagen is consistently advancing its further development into the most desirable brand for sustainable mobility.
