New Tiguan awarded 5 stars in current Euro NCAP safety assessment

- Top marks for top-selling model: new Tiguan achieves highest score for impact protection and accident prevention technologies
- Enhanced protection in rear passenger compartment: rear side airbags are also fitted as standard in the new Tiguan.
- New exit warning system: the entry-level version of the latest Tiguan already includes a wide range of assist systems such as the exit warning system

Wolfsburg – Euro NCAP, the renowned European consumer protection programme, has awarded the new Tiguan the highest rating of five stars for safety. This means the third generation of the best-selling model is officially one of the safest vehicles in its class. The Volkswagen scored particularly well in the category of child occupant protection. This rating is all the more important as the Tiguan, which has sold well over 7.6 million units, is an ideal all-rounder for families.

The new Tiguan has been on the market since 2024.

accident prevention technology. Since 2023, the Euro NCAP test criteria have become even stricter: the new requirements include, for example, the ability to detect any children left in the car – this criterion is also fulfilled by the new Tiguan generation. In addition, protection in the rear passenger compartment is optimised by the side airbags for the outer seats fitted as standard in the new Tiguan. For families with children, the exit warning system on board the Tiguan as standard is a useful feature in everyday life. Within the system limits, it can protect against an occupant opening one of the doors when another road user (bicycle, e-scooter, motorbike, etc.) is approaching from behind. The system issues both acoustic and visual warnings in this case.

Equipped for safety as standard. The entry-level version¹ of the new Tiguan has the following safety technologies on board as standard (excerpt):

- Oncoming vehicle braking when turning and swerve support
- Driver Attention Monitor and Driver Alert System
